

Rapid Risk Factor Surveillance System

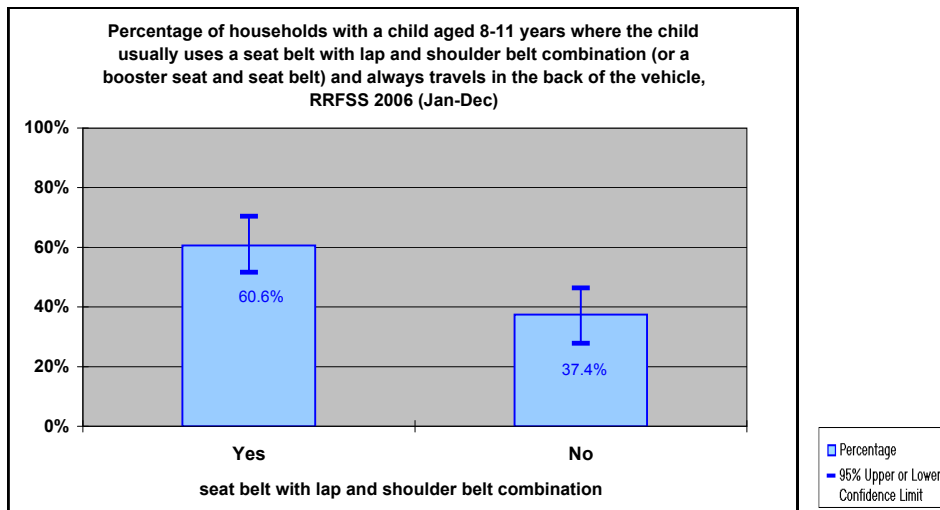

Haliburton, Kawartha, Pine Ridge District Health Unit RRFSS 2006 (Jan-Dec) - Booster seat 8-11 years

Percentage of households with a child aged 8-11 years where the child usually uses a seat belt with lap and shoulder belt combination (or a booster seat and seat belt) and always travels in the back of the vehicle, RRFSS 2006 (Jan-Dec)

seat belt with lap and shoulder belt combination	Proportion	95% upper confidence limit	95% lower confidence limit
Yes	60.6%	70.4%	51.6%
No	37.4%	46.4%	27.8%
Do not know\Refused	--	--	--

Sample size: 104

** Not released

Interpretation:

- 60.6% (+/-9.5%) adults (age 18+) who has a child aged 8-11 where the child usually uses a seat belt with lap and shoulder belt combination (or a booster seat and seat belt) and always travels in the back of the vehicle".
- 37.4% (+/-9.4%) adults (age 18+) who has a child aged 8-11 where the child do not usually a seat belt with lap and shoulder belt combination (or a booster seat and seat belt) and not always travels in the back of the vehicle".

Limitations:

1. Questions only asked of adult residents aged 18+
2. Telephone survey only conducted in English
3. Results are based on self-reported behaviors.
4. (*) indicates that results are based on small sample size, thus estimates have high variability.

Notes:

- 1) The numbers in the tables and graphs are weighted.
- 2) Missing responses are not included in the analysis.
- 3) Don't know and refused responses are analyzed according to RRFSS analysis guideline.
- 4) Release criteria of the data is according to RRFSS analysis guideline.

* Interpret with caution, high variability.

** Data not released.
